SONOR, proudly celebrating a 135+ years of tradition & excellence, has announced the launch of several new products, to be introduced at the Winter NAMM Show 2012 in Anaheim, CA, USA

NEW: DUAL GLIDE SYSTEM Snare Strainer Mechanism

A new and innovative Snare Mechanism is now incorporated into the new ProLite Series, as well as the SQ² and Artist Series snare drums. The new strainer mechanism features a technically perfected snare wire engage-and-release system, along with great adjustability and a solid look and feel .

“DUAL GLIDE SYSTEM” refers to the precise and smooth action, which in turn eliminates any un-wanted sounds when the snare wires are placed in "on" or "off" position. Both the strainer and butt sides are equipped with a fast-release snare wire detach function, allowing the drummer to change the resonant head without having to loosen and adjust the Snare wires. A fine-tune adjustment knob is employed on both sides. Thanks to the well thought-out design and construction, the new strainer also works to replace the current strainer on any Made in Germany drum series, and will be available as an individual component for retro-fit onto any Sonor snare drum!

The new SONOR “Dual Glide System” will appear on Sonor’s new ProLite Series at NAMM 2012, as well as on all SQ² Series snare drums ordered starting in January, and on the Artist Series snares following the Muiskmesse in March 2012.
